1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.
2. Claims 7 and 8 are objected to because they are improper since they are dependent claims that do not further limit the recitations of claim 1 or 4 and instead merely rename the step-down circuit or power supply circuit as a semiconductor integrated circuit. Appropriate correction is required.
3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1 and 7 are rejected under 35 U.S.C. 102(e) as being anticipated by Botker et al (US 6,661,683).

Botker et al discloses a step-down circuit (see lines 26-29 of column 1) comprising a clock control circuit (88) providing a plurality of clock signals (S2-S10B) based on a control signal (OFFV+B or OFFV-B or V+NV-), a charge pump circuit (90) receiving a first potential and supplying a second potential by switching a plurality of capacitors (40-46) with the plurality of clock signals, and a comparator (56-60) producing the control signal.

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2838

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claim 2 is rejected under 35 U.S.C. § 103(a) as being unpatentable over Botker et al.

Botker et al discloses a step-down circuit as explained above and as recited by claim 2 except for utilizing a circuit supplied with the input voltage to generate the reference voltage. Official notice is taken that utilizing a circuit supplied with an input voltage to generate a reference voltage was an old and known expedient in the art at the time of the invention. It would have been obvious to one of ordinary skill in the art at the time of the invention to have modified the step-down circuit disclosed by Botker et al by utilizing a circuit supplied with the input voltage to generate the reference voltage in order to supply a reference voltage without requiring an additional voltage source.

7. Claims 3 and 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

8. Claim 8 would be allowable if rewritten to overcome the objection set forth above in this Office action .

9. Claims 4-6 and 10 are allowed.

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Tamagawa (US 5,461,557), Ohnishi et al (US 5,608,614), Kowshik et al (US 5,625,544), and Lin et al (US 6,642,773) are cited to show power supply circuits old and known in the art at the time of the invention.
